(54) Title: SYSTEM AND METHOD FOR DYNAMICALLY CONFIGURED, ASYMMETRIC ENDPOINT VIDEO EXCHANGE

(57) Abstract: Provided herein are exemplary embodiments of a system for and method of initially and dynamically allocating the available resources that affect video quality in an asymmetric endpoint network so as to provide an enhanced quality of video exchange. Relevant variables that may be dynamically configured to allocate resources include, but are not limited to, frame size, frame rate, choice of codec (e.g., MPEG4, H263, H263+, H264), codec bit rate and size of rendering window (which may or not be identical to the frame size).
